                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to purified proteins and genes encoding them, that are involved in T cell activation (I) and has an amino acid deletion, substitution or addition in the amino acid sequences. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of autoimmune disease (rheumatoid arthritis, asthma, multiple solerosis and diabetes), allergic disease, infectious disease, AlDS, and acute or chronic rejection at organ transplant or bone marrow transplant. This sequence corresponds to a cDNA for a protein involved in T cell activation.
                                                                                                            se; gene; antiallergic; antiarthritic; antiasthmatic; antidiabetic; anti-HIV; antimicrobial; antirheumatic; immunosuppressive; neuroprotective; gene therapy; T cell activation; diagnosis; autoimmune disease; rheumatoid arthritis; asthma; multiple sclerosis; diabetes; allergic disease; infectious disease; AlDS; chronic rejection; organ; bone-marrow transplant.

Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length

NO 18586; 2537pp + Sequence Listing; English SEQ ID 8 Claim The present invention describes primer sets for synthesising 5602 fulllength cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide comprises one of the 5602
complementary strand of a polynucleotide which comprises one of the 5602
nucleotide sequences defined in the specification, where the
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide so 1 selected from those defined in the
coligonucleotide which comprises at least 15 nucleotides and the combination of
coligonucleotide which cDNAs. The primers are also useful for the
coligonucleotide say specialised methods. AAH03166 to AAH13628 and
AAH13633 to AAH13633 to AAH3632 represent
coligonucleotides, all of which are used in the exemplification of the present invention

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as
                                                                                                                                                                       644
                                                                                                                                                                                                                                                                                                     664
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ě,

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB80441) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.

The nucleic acids, proteins, antibodies and (ant) agonists are useful in the disposis, treatment and prevention of: (a) cancer, e.g. breast and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune cancers e.g. Addison's dispesse, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, cardiovascular disorders such as myocardial isolatemias; (d) wound healing conditions. Or anaemia diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder; neurological disease; infection; human; secreted protein; gene; ss.
Novel 1405 isolated polypeptides, useful for diagnosis, treatment and prevention of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 22217, Application US/09252991A

Patent No. 6551795
GENERAL INFORMATION
GENERAL INFORMATION
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US 60/074,788
FILE REPERBORCE: 1999-02-18
FRIOR APPLICATION NUMBER: US 60/094,190
FRIOR PILING DATE: 1998-02-18
FRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 22217
LENGTH: 228 ö 6077, Ap 381, App 4131, Ap Sequence 42367, Application US/09270767
Sequence 42367, Application US/09270767
Patent No. 6703491
GENERAL INFORMATION
GENERAL INFORMATION
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 4224, Application US/09513999C

Patent No. 6783961

GENERAL INFORMATION:
APPLICANT: Dunas Milne Edwards, J.B.
APPLICANT: Duclert, A.
APPLICANT: Glordano, J.Y.
TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
Patent No. 6783961
FILE REFERENCE: 59.US2.REG
CURRENT PAPLICANION NUMBER: US/09/513,999C
CURRENT PILING DATE: 2000-02-24
PRIOR APPLICATION NUMBER: US 60/122,487
PRIOR APPLICATION DATE: 1999-02-26
                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
